

A2L INFORMED. A2L READY.

R32

WE WOULD LIKE TO REMIND OUR CUSTOMERS:

The restrictions and requirements for servicing equipment with approved refrigerants are quite stringent and thoroughly enforced.

Using R-32 in an R-454B unit is not only against manufacturers' recommendations due to differences in their chemical compositions and operating characteristics, it may also violate EPA and UL/ETL rules:

- EPA's SNAP Rule 23 states that R-32 refrigerant may be used only in new equipment **specifically designed and clearly identified for the refrigerant.**
- EPA's Technology Transition Rules provide that no person may falsely indicate that a product uses or is intended to use a regulated substance (e.g., refrigerant) that is different from the regulated substance actually used.
- Using a refrigerant other than that for which a system is marked may invalidate its UL/ETL safety listing – the National Recognized Testing Laboratory listing includes details of the unit design, **including the refrigerant to be used.**

Until further notice, in support of the industry and regulations, Daikin is only selling R-32 to customers buying Daikin/Amana® brand/Goodman HVAC equipment.
